

AICC Player Widget

Overview

This release introduces support for AICC content within the Frog platform.

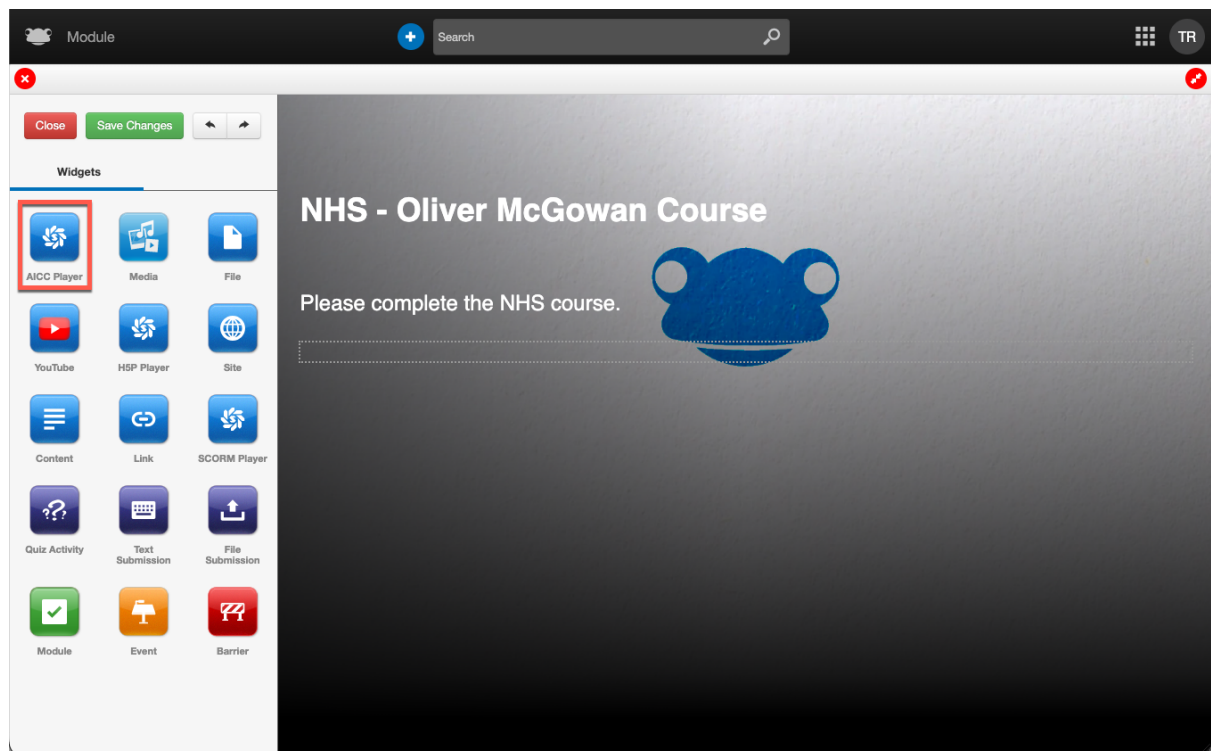

AICC content is primarily intended for LMS providers that need to integrate with the NHS England e-Learning for healthcare (e-LfH) hub. It works in a similar way to SCORM content, but is launched through an embedded URL rather than being uploaded directly to the platform.

Unlike SCORM content, AICC does not return a percentage score. Instead, once the learner reaches the end of the content, completion information is sent back to Frog and the activity is marked as Completed within the AICC Player.

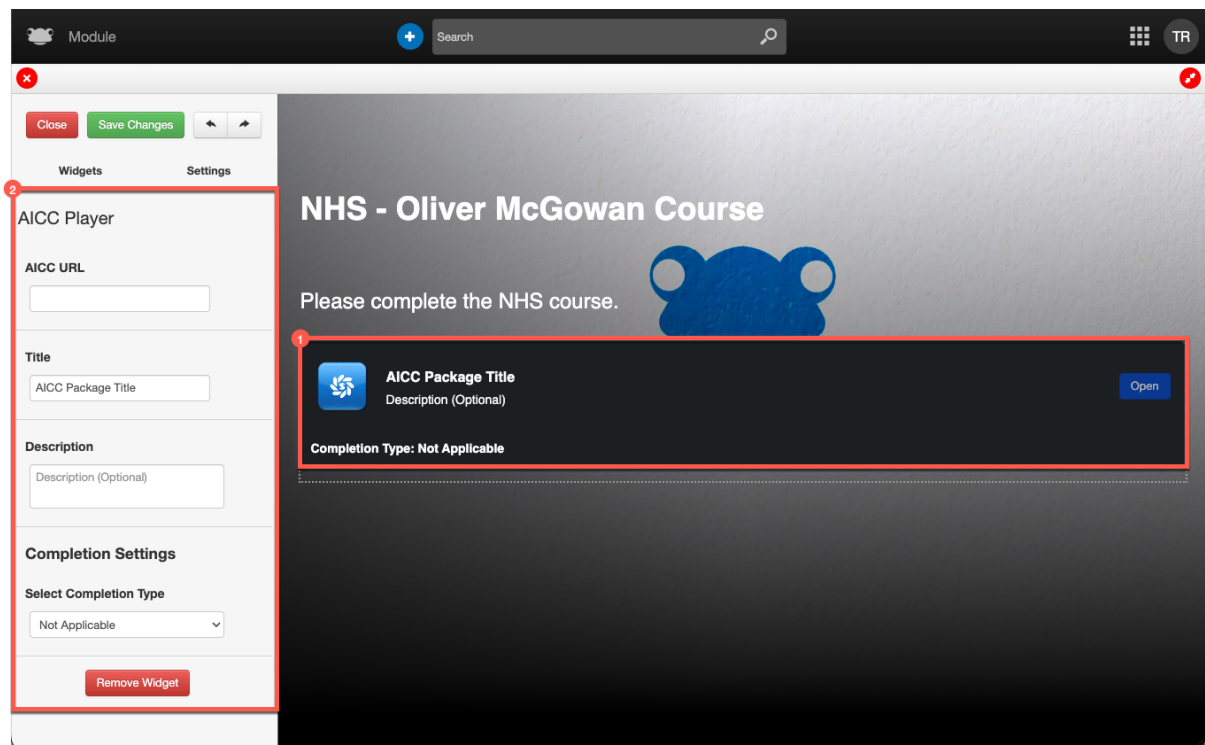

This feature is available upon request, as additional setup and configuration costs apply. To find out more about enabling this functionality, please contact the Customer Success Team at customersuccess@frogeducation.com.

How-to

We will now look at how to add AICC content to a module. Navigate to a module and enter edit mode, where you'll see the new **AICC Player** widget available.

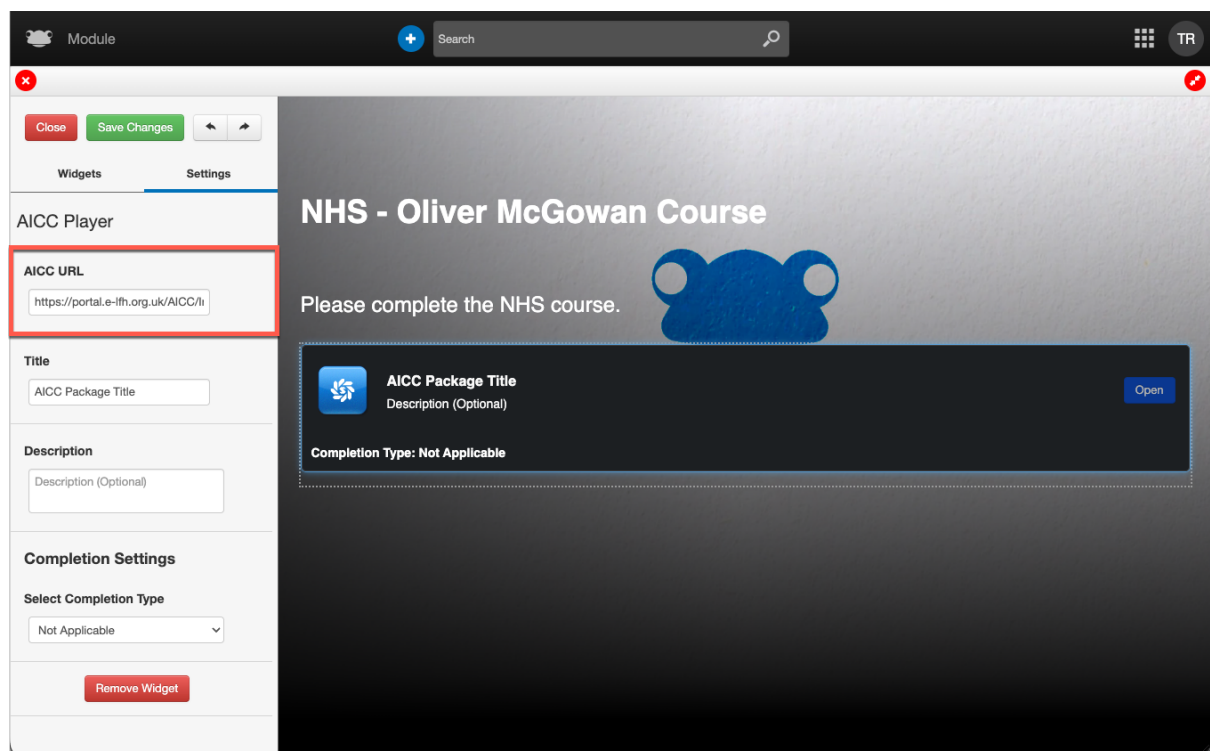

Drag and drop the **AICC Player** widget onto your module, then select the widget to view the available settings.

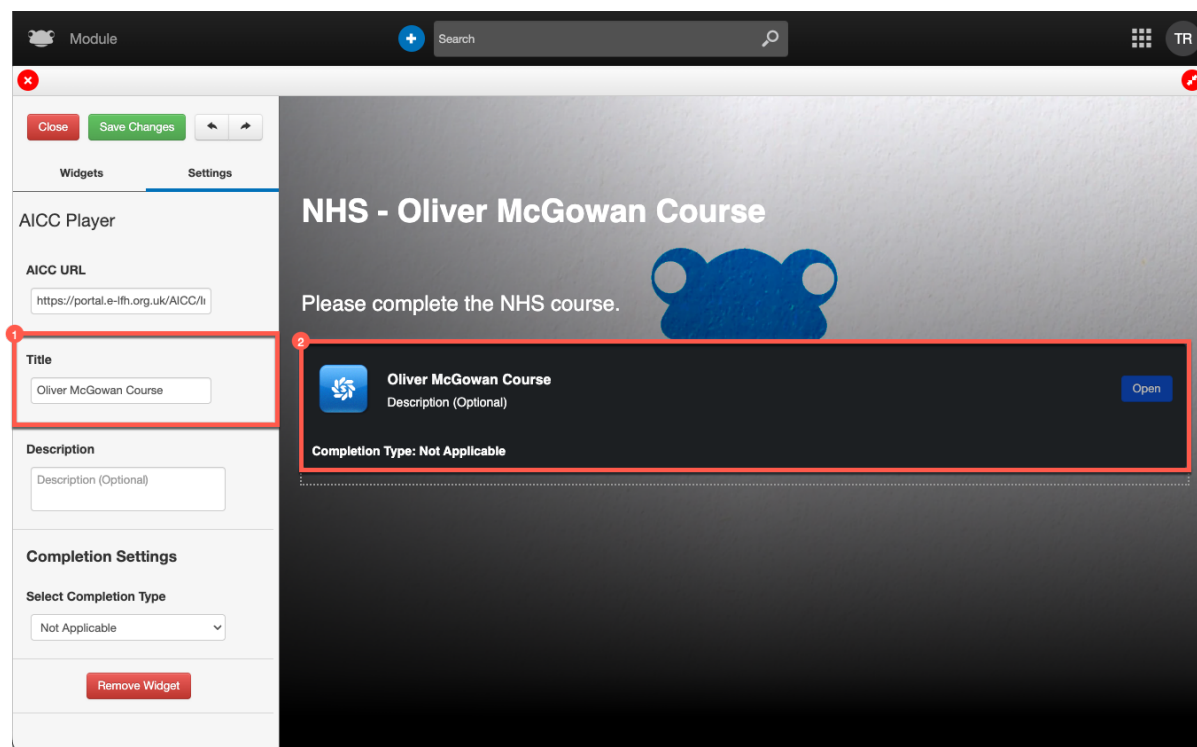

The first step is to enter the URL for your AICC content into the **AICC URL** field. In this example, we are using the following URL:

https://portal.e-lfh.org.uk/AICC/InitialiseRelay?CONTENT_URL=/AICC_Content/OMLDA_01_001

Next, enter a name for the AICC content that the learner will complete. In this example, we have entered **Oliver McGowan Course** into the **Title** field.

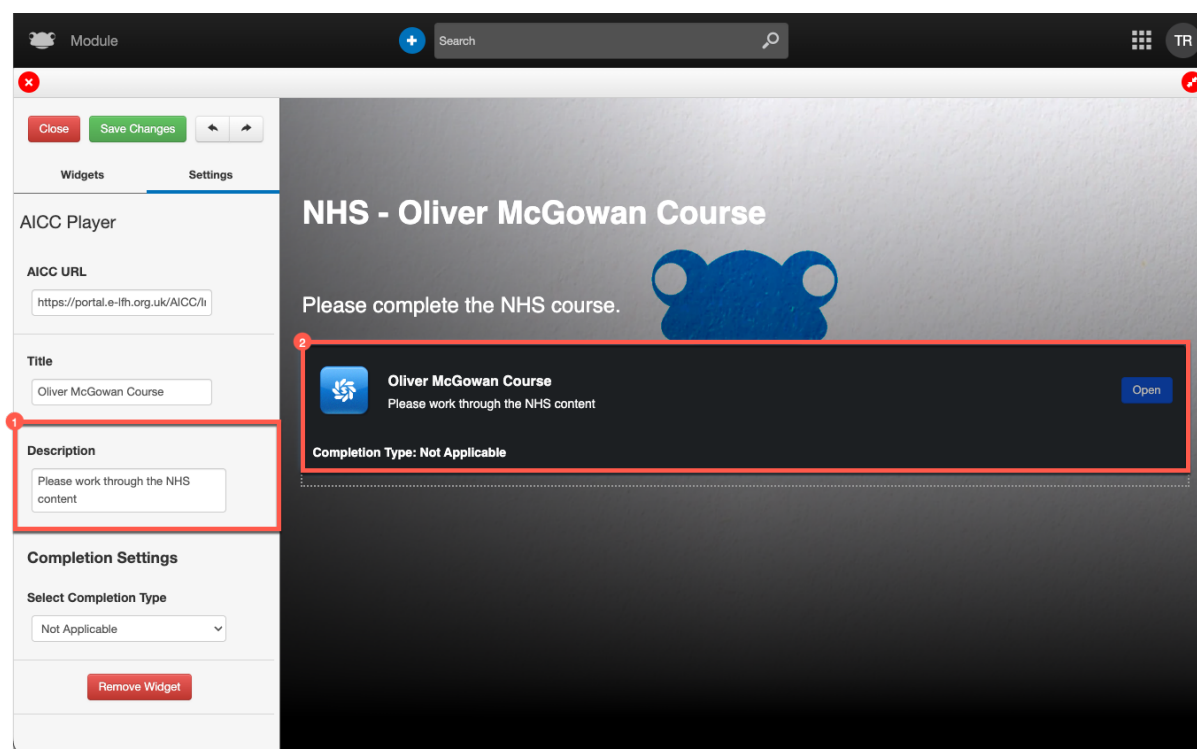

You will notice that the title is immediately reflected on the widget.

You can also provide additional information about the AICC content by entering it into the **Description** field. In this example, we have entered:

Please work through the NHS content

You will notice that the description is immediately reflected on the widget.

The last option within the widget settings allows you to choose how the activity will be marked as completed for the learner. The standard completion settings below are available and will work with AICC content:

- Not Applicable
- Mark completed manually
- When AICC link has been opened
- Score greater than passmark
 - **NOTE** – For **Score greater than passmark** you will not be asked to enter a percentage. This is because AICC does not return a percentage score. Instead, once the learner reaches the end of the content, completion information is sent back to Frog and the activity is marked as Completed within the AICC Player.

The screenshot shows the AICC Player settings interface. On the left is a settings sidebar with tabs for 'Widgets' and 'Settings'. The 'Settings' tab is active, showing fields for 'AICC URL' (https://portal.e-llh.org.uk/AICC/), 'Title' (Oliver McGowan Course), and 'Description' (Please work through the NHS content). Below these is the 'Completion Settings' section, which includes a 'Select Completion Type' dropdown menu. The 'Not Applicable' option is selected and highlighted with a red box. The main content area on the right displays the course title 'NHS - Oliver McGowan Course' and a blue frog icon. Below this, it says 'Please complete the NHS course.' and shows a preview of the course player with the title 'Oliver McGowan Course' and the instruction 'Please work through the NHS content'. The 'Completion Type: Not Applicable' is also displayed in the preview.

Completion Type: Not Applicable

In this example, **Score greater than passmark** has been selected as the completion setting. The widget now displays the following message:

You must achieve a score equal to or higher than the pass mark for this AICC package.

From a learner's perspective, AICC content works in the same way as SCORM content. When viewing the module, the activity will display an **Open** button, which the learner can select to launch the AICC content.

After selecting the **Open** button, a new window will open and the AICC content will load, ready for the learner to interact with.

The screenshot shows a web application interface for the NHS Oliver McGowan mandatory training. The top header bar is dark grey with a 'Module' label and a 'Log out Elizabeth Chatters' link. Below the header, the main content area is white. On the left, there is a sidebar with the NHS England and elfh (elearning for healthcare) logos. The main content area features the title 'The Oliver McGowan mandatory training on learning disability and autism'. Below the title, there is a section titled 'At any time, select the:' with two options: 'drawer icon for more project information or to use the search function' and 'eye icon to reveal the dyslexia overlays'. A note states 'Select the 'How to use this session' chapter to begin.' Below this, there is a vertical list of four chapters: 'How to use this session' (green), 'Oliver's story' (blue), 'Understanding learning disability' (orange), and 'Understanding autism' (green). On the right side of the main content area, there is a large graphic featuring the Oliver's Campaign logo (a red square with a white 'O' and 'M'), a photo of a young man, and the NHS England logo. The skillsforcare logo is also visible.

In this example, **Elizabeth Chatters** has completed the AICC content. After closing the content window, the activity is shown as **Complete**. As this is the only activity within the module, the overall module status is also updated to **Complete**.

The screenshot shows the completion screen for the NHS Oliver McGowan Course. The top header bar is dark grey with a 'Module' label and a 'Log out Elizabeth Chatters' link. Below the header, the main content area is light grey. The title 'NHS - Oliver McGowan Course' is displayed. Below the title, there is a green 'Complete' button. A message states 'Please complete the NHS course.' Below this, there is a blue cloud-like graphic. At the bottom, there is a dark grey box with a red border. Inside this box, there is a blue icon of a person, the text 'Oliver McGowan Course', and a subtext 'Please work through the NHS content'. There is an 'Open' button. Below this, there is a checkbox labeled 'You must achieve a score equal to or higher than the pass mark for this AICC package.' and a green 'Complete' button.

When the **Score greater than passmark** completion setting is used with the AICC Player widget, no percentage score is returned by the content. As a result, the **Module Compliance Report** displays a green tick to indicate that the activity has been completed, rather than showing a score.

In this example, **Elizabeth Chatters** has a green tick against the AICC content, and the overall module status is shown as **Completed**.
